

Energy-Saving in Style

In winter, up to 50% of the heat in our homes escapes through the windows and on sunny days in summer excessive radiant energy pours in. **By fitting energy-saving window coverings, we can reduce the energy we use to heat, light and cool our homes by up to 30%.** Not only is that a huge cost-saving over time, it's a significant contribution to reducing our carbon emissions.

There are many ways of covering windows, **whether for insulation, controlling solar heat or optimising daylight**, all of which reduce energy consumption and enhance the comfort of a room – as long as they are correctly fitted.

At The Pole Company, we have been advising on, supplying and fitting energy-saving window coverings for over 20 years. We have a background in interior design, so you won't have to compromise on the look of your room to reduce your energy bills. And to set your mind at rest, we actively search out suppliers whose products are sustainably sourced and manufactured and can easily be recycled: all in all a big step forward for your ecological footprint.

Shutters

A stylish and effective way of insulating windows, shutters have the added advantage of filtering daylight into a room, lending it a soft, ambient glow and reducing the need for electric lighting. When closed, the veins trap a layer of insulating air next to the window. S Craft shutters have an L- shaped frame to block out draughts around the edge of the window frame, whilst Luxaflex vinyl shutters are 100% recyclable.

Close-Fitting Wood Venetian Blinds

The closest-fitting wood venetian on the market is made by S Craft. This cleverly-designed blind has cords on the outer edges of the slats, so there are no cord holes and the slats touch when closed, eliminating draughts. All our blinds are fitted with Child Safety Clips to comply with EU regulations.

Curtains with Thermal Linings

A traditional choice of draught-proofing, the luxury and softness of curtains make for a cosy home, particularly when they are thermally-lined. This provides a more effective insulating barrier than lined and interlined curtains. Our range of thermally-lined curtains from Drapes can be co-ordinated with an extensive choice of curtain poles and tracks to suit your décor.

Roman Blind with Thermal Lining

Our roman blinds from Drapes fit edge to edge within the window frame to reduce draughts. We have an extensive range of fabrics to choose from, or you can supply your own. When lined with thermal lining, these blinds are more effective insulators than the traditionally lined and interlined version. All our blinds are fitted with Child Safety Clips to comply with EU regulations.

Luxaflex Duette Architella Shade®

The honeycomb pleated fabric of the Luxaflex Duette Architella Shade® traps three air pockets between its four layers, doubling the insulating properties of a window in winter and reducing the entry of solar radiation in summer by half. This is one of the most energy-efficient blinds on the market. All our blinds are fitted with Child Safety Clips to comply with EU regulations.

The Pole Company

Poles | Shutters | Blinds | Awnings

Open 9 – 5, Monday – Friday | 10 – 5, Saturday

1 Saracen Street, Bath, BA1 5BR
